About Foldscope & Workshop

Foldscope is an ultra-affordable paper microscope inspired by origami. It is a powerful optical scientific tool; especially where larger, expensive instruments are impractical due to cost, size, complexity and availability to the community. DBT, Government of India in partnership with Foldscope Instruments Inc. and Prakash Lab (Stanford), initiated the use of foldscope to trigger excitement and curiosity in science.

The workshop is focused to proliferate the knowledge and awareness about the foldscope. The platform will provide hands-on-training on the foldscope and its combination with cell phones to record images and video.

Symposium on Applied Biotechnology

This symposium will bring talks by scientists on aspects of current scientific advancements. The objective is to provide a platform to the researchers, academicians and industrial professionals to present their research results and developmental activities in Applied Biotechnology. It will also serve to further the advancement and innovation in biotechnology teaching and research.
